

Kellie Hucker Cybersecurity Analyst San Francisco, CA

khucker3d@gmail.com | <https://www.linkedin.com/in/khucker3d/> | github.com/khucker3d

OBJECTIVE

Detail-oriented professional transitioning into cybersecurity after a successful career in the U.S. Army and technical game development. Experienced in investigation, system validation, automation, and documentation. Seeking an entry-level Cybersecurity Analyst or GRC role where I can apply hands-on SIEM experience, structured problem-solving, and operational discipline to support security monitoring and risk management.

EDUCATION

- **Google Cybersecurity Professional Certificate:** March 2026
- **Google IT Support Profession Certificate:** In Progress
- **U.S. Army – Military Police:** Basic and Advanced Individual Training, Mar 1999

TECHNICAL & BUSSINES SKILLS

- **Scripting Languages:** Python, HTML, JavaScript, PHP, XML
- **Operating Systems:** Windows, macOS, Linux (Ubuntu, Kali), iOS, Android
- **Tools:** Wazuh, OpenSearch, Docker, VMWare, VirtualBox, VPNs, Endpoint Protection, ChatGPT, Claude, Gemini
- **Concepts & Practices:** SIEM fundamentals, log ingestion and analysis, alert validation, MITRE ATT&CK awareness, basic system hardening, access control concepts, vulnerability awareness, Jira
- **Core Strengths:** Investigative mindset, problem-solving, detailed documentation, clear and concise communication, cross-functional collaboration, live user support, adaptability, operational discipline, calm under pressure

PROJECTS

Security Automation Toolkit (Python) | [Github](#)

Apr 2026 - Current

- Developed a collection of Python-based security tools to automate common cybersecurity workflows, including encryption, credential generation, and data protection
- Designed modular, reusable scripts aligned with real-world security use cases such as secure file handling, password management, and data obfuscation
- Applied secure coding practices using Python libraries such as secrets, hashlib, and cryptography
- Built user-friendly interfaces (Tkinter GUI) to improve accessibility of security tools for non-technical users
- Structured projects with clear documentation, version control (Git), and reproducible workflows

Blue Team Detection Home Lab | [Github](#)

Apr 2026 - Current

- Designed a modular, enterprise-style security lab, applying systems-thinking from technical art pipelines to network security architecture
- Built and monitored Active Directory environment with endpoint telemetry (Sysmon) and SIEM (Wazuh)
- Engineered detection rules and alerting pipelines for authentication-based attacks (brute force, password spraying, account lockouts)
- Correlated multi-event signals to simulate real-world detection engineering workflows
- Mapped detections to MITRE ATT&CK techniques to align with industry standards
- Produced Confluence-style documentation and playbooks for repeatability and incident response

Secure Device Decommissioning and Endpoint Reprovisioning | [Github](#)

Jul 2025

- Identified legacy enterprise BitLocker encryption preventing system recovery on a personally owned Windows laptop
- Assessed TPM and encryption state, confirmed recovery key was unavailable, and evaluated remediation options
- Performed a full disk wipe and removed all existing partitions to eliminate residual enterprise controls
- Installed Windows 10 Pro and re-established Secure Boot and TPM-backed encryption
- Validated system integrity and prepared the device for secure cybersecurity lab and VM usage

Home Network Security:

Oct 2003 - Present

- Installed and managed home network infrastructure, including routers, repeaters, and Ethernet cabling
- Secured 4G and 5G internet connections and enforced Wi-Fi access controls
- Monitored connected devices using ISP tools, identified unauthorized access, and remediated risks
- Removed malware from compromised systems
- Implemented preventative security measures and phishing avoidance practices to reduce recurrence

RELATED EXPERIENCE

Git Repository & Version Control Administration (Windows & macOS) Mar 2019 - Jan 2026

- Configured repository access using SSH key authentication
- Generated and managed SSH keys, configured .ssh permissions, and validated remote connectivity
- Performed branch creation, rebasing, merging into main, and pull request submissions

Asset Infrastructure – Various AA & AAA Game Studios Jan 2009 – Jan 2026

- Worked with secured repositories supporting large-scale asset pipelines
- Developed automation scripts to validate assets and enforce consistency
- Collaborated cross-functionally to define structured, auditable workflows for asset deployment
- Configured test environments to assess integrity and compatibility across devices
- Authored detailed technical documentation, tooling guides, and operational procedures

U.S. Army – Military Police / Team Leader Sep 1998 – Dec 2001

- Conducted incident response and field investigations involving security violations and suspicious activity
- Deployed to high-risk environments supporting NATO stabilization missions
- Led investigations and collaborated with multinational law enforcement agencies
- Documented incidents and compiled detailed investigative reports
- Operated surveillance and detection equipment to protect high-value personnel and assets
